

TranzItBLU APP User Manual

- ON:** Turns FM radio interface ON and keeps it ON while APP is running or OFF is selected
- OFF:** Turns FM radio interface OFF
- AUTO:** Automatically turns FM radio interface ON/OFF according to Bluetooth (A2DP) activity (Note: Select ON before selecting AUTO)

FM broadcast frequency: This is the FM frequency TranzItBLU is broadcasting to your FM radio on. Be sure to tune your radio to this same frequency.

FM broadcast frequency slide adjustment: Slide left or right to select best performing FM frequency

FM broadcast frequency button adjustment: Use these to select best performing FM frequency

MENU Button (on phone): Allows selection of FM radio region; North America, Japan or Europe

IMPORTANT NOTE: While listening to certain sources of music such as Pandora that have extended pauses between songs it is possible that the radio interface of the TranzItBLU will disengage. When this occurs your FM radio will play through again momentarily. Once the next song begins, the TranzItBLU will reengage and play through. The TranzItBLU behaves this way due to the Bluetooth A2DP signaling. If this functionality is not desired, you can choose not to use the AUTO setting and instead select ON in the TranzItBLU App as outlined above. This will provide a less disruptive listening experience.
